Severity breakdown

CRITICAL: 1 | HIGH: 1 | MEDIUM: 1 | LOW: 0

Heuristic findings require manual verification. Risk indicator is NOT likelihood of compromise.

Detailed findings and remediation

1. MEDIUM | PHP005 | Potential weak password hashing

sample_data/sample.php : line 3

Recommendation: Use password_hash() and password_verify() for passwords.

2. HIGH | PHP003 | Potential unsafe deserialization

sample_data/sample.php : line 4

Recommendation: Avoid unserialize() on untrusted input; prefer JSON.

3. CRITICAL | PHP001 | Dynamic code execution

sample_data/sample.php : line 5

Recommendation: Avoid eval() with untrusted input.
